Hiring Manager  
AMD  
Toronto, Ontario, Canada

Dear Hiring Manager

I am excited to apply for the position of GPU Graphics Driver Debug Engineer Intern as advertised on the University of Toronto PEY job board. It is a great opportunity for 12-16 months of crucial, real-world experience of industry software development for any student!

Having just begun my career of software development, I've managed to gain some important, insightful experience about the development process. My previous internship position at Verto Health as a software engineer helped me adjust to the fast-paced the Agile development process where I became familiar with new tools such as Vue, Jira, and Ruby on Rails quite quickly. Through courses such as CSC209 and CSC369, I have learned a lot about developing software in C/C++ working close with low level systems, relevant to this position. I hope I am able to take what I learned in school in tandem with my previous software development experience and apply it to a real-world problem at AMD.

Learning new tools and frameworks is very appealing, especially when working in environments that have a goal of improving people's lives and experiences. When developing software at Verto, I realized how many healthcare clinicians my code could help reach even as an intern. To me, AMD provides that opportunity in a much larger scale. To work directly on AMD products, which have been used by myself and my peers around me on a regular basis, would be extremely rewarding, and I would love to utilize all my development knowledge to do so.

I am positive that my strive for positive impacts, desire for knowledge, and experiences highlighted here and in my resume makes me an ideal candidate for the GPU Graphics Driver Debug Engineer Intern position at AMD.

Sincerely yours,

Simon Chen
